## Succulent Plant Care Instructions

Succulents are fun and unique to give and receive. They are among the easiest plants to care for, making them a great gift for everyone on your list.

**Important:** As soon as you receive your plants, please remove them from their packaging. Check soil moisture and water if necessary.

### Care Instructions

**Light:** Succulents thrive in bright, filtered light but will survive in lower light conditions.

**Temperature:** Average room temperatures, between 60-75°F.

**Water: The key to succulent care is to avoid overwatering.** Add about a tablespoon of water to the potting mix and wait until the soil dries out before watering again. This could take a couple days to over a week. Water needs will vary depending on air temperature, humidity and light level.

For optimum growth, mist the plant once a month with Succulent Fertilizer, sold separately.
